INTRODUCTION

My name is Reginald Perry and I've been creating apps since 2012 for verification please visit my site www.stcreate.net. I have created several apps without knowing how to code and have made money from them. In this short guide, you will discover 6 detailed and proven steps to make your own app without coding. You will also discover how to make money from them on a monthly basis.

But first,

Why apps?

1. The mobile revolution.

Compared to websites, apps make search as well as other functions easier and faster. For example, it is easier for a person to open an app to complete a task than visiting a website to perform the same task.

2. You will want to create more apps...

After your first one. Getting started with building apps is the hardest part. This is due to the fact that it is a large and growing industry.

Once you are able to build your first app, you will realize that there is nothing you need to fear. This is one of the major reasons why most people have more than one app in the app store. There is strong evidence to support this claim;

at the moment, there are over 250,000 registered app developers in the Apple app store, while there are more than 700,000 apps in there.

Obviously, you can choose to do this on a full time or part-time basis.
